

## **Apply Now for the 2021 TREAT-NMD DMD Masterclass! Places Available!**

Applications are open and places are still available for the 2021 TREAT-NMD DMD Expert Masterclass. The event is an online masterclass which will take place on 5<sup>th</sup> and 6<sup>th</sup> May 2021 and feature sessions on standards of care, emerging therapies, genetics and much more. The masterclass will be delivered using our virtual conferencing software to enable a range of interactive sessions. Alongside the lectures, there will be a range of breakout sessions with Q&A interaction so that delegates have the opportunity to discuss issues, ask questions and to network.

This masterclass is aimed at professionals working in the diagnosis, care and treatment for people living with DMD. The event was originally planned to take place face to face in Sao Paulo, Brazil in 2020, but was postponed. With this, there are sessions which focus on issues faced with diagnosis, care and treatment in the South American region, so clinicians from this area will be given priority when places are allocated.

Both the agenda and selection of participants is overseen by the TREAT-NMD Education Committee (TEC). Whilst financial support is generously received from Sarepta and PTC, the masterclass is organised and run entirely independently by TREAT-NMD.

You can apply for a place [here](#).
